Welcome to TDM digital signage

Thank you for your interest in TDM digital signage software. TDM is a cloud-based digital signage solution that can be fully managed and configured using your web browser. This manual is designed to assist users in a user-friendly way to install TDM on your computer or screen, and to publish content.

- Minimum system requirements
- Functions
- Installing TDM

Before we begin, we would like to let you know that we will be available to assist you at any time if you encounter any difficulties. We are here for you, regardless of whether you are a new or existing TDM user. Our contact details can be found on our website: <http://www.tdmsignage.com/contact/>

Android version

Minimum system requirements:

- Android-compatible device (versions 5.0 and up)
- Recommended minimal space of 4GB
- Recommended memory 1GB
- Wi-Fi or cable internet connection*

* A cable connection is recommended for displaying Full HD content.

Functions

Function	Player-version [PC]	Non-player version [HTML5]	Android version [ANDROID]
Video upload	v	x	v
Youtube	v	v	v
PDF integration	v	v	v
Powerpoint integration	v	v	v
Twitter integration	v	v	v
Instagram integration	v	v	v
Facebook integration	v	v	v
Websites	v	v	v
Flash	v	x	x
Silverlight	v	x	x
Streaming Video	v	v	v
Streaming Audio	v	v	v
Weather feed	v	v	v
Dynamic text	v	v	v
External data [RSS/XML]	v	v	v
Media RSS	v	v	v
TV-channels (only with Sony)	x	v	v
Local caching*	v	x	v
Ticker tape	v	v	v
Plan module (scheduling)	v	v	v
Bandwidth-efficient**	v	x	v
Monitoring	v	v	v
RS232 Commandos	v	x	
Touch functionality	v	v	v
Interactivity	v	v	
Spectator Statistics ***	v	x	x
Offline mode	v	x	v

*) Local caching is used to retrieve data from the server and save it to the local PC, so as to ensure that presentations can still be displayed even when your internet connection is down. Note: this does not apply to services such as audio and video streaming.

**) The player is bandwidth-efficient because the data is retrieved from the TDM servers only once. The player version and Android app do not need to retrieve the content from the internet on each separate occasion, making it bandwidth-efficient.

***) For the use of Spectator Statistics you need a full-hd camera, connected to your screen and player. Furthermore you need to download additional software from the download section in the TDM designer. TDM Spectator Statistics licenses can be purchased through your reseller of distributor.

Now that you are aware of the system requirements and know what version you will be using, you are ready to proceed to the next step – installing TDM.

Installation of Android app

Switch on your Android device. In your apps, please find the Google Play Store and open it. In the store, please use the search function to search for “TDM Signage Native app”. Click the app and download it.

TDM Digital Signage
Blue and Red BV

As soon as you have done so, start the app and a popup will appear, asking for you license code. You can find this in your Designer; it is the last part of your license-URL. In the example below, it would be “g92onupu”. Fill it out in the field and click Save.

Once you have clicked Save, the app will start looking for content and will show up in your Designer as a player:

PLAYER OVERVIEW

OVERVIEW PLAYERS

Name	License	Status	
HTML player 1 http://html.tdmsignage.com/g92onupu	HTML5	●	Show player URL

All you need to do now is assign your player to one of your presentations. In the TDM Designer manual you can find how to do this.

After linked the player to a presentation the status icon will display as green. Like a PC and HTML5 player license, an Android license can only be used on one device at the same time.

Support

After reading this manual, you should be able to install the TDM Android app on your Android device. Our website also contains answers to Frequently Asked Questions (FAQ).

If you require additional support, we will be pleased to assist you from Monday to Friday from 9:00 a.m. to 5:00 p.m. at telephone number +31 20 2610985 or by e-mail at support@tdmsignage.nl.
